

ECONOMIC RECOVERY WIDESPREAD ACROSS STATES IN 2010

Advance Statistics of GDP by State

- Real GDP increased in 48 states and the District of Columbia in 2010, mainly due to growth in durable-goods manufacturing, retail trade, and finance and insurance.
- Durable-goods manufacturing was the leading contributor to real GDP growth in 29 states, contributing more than two percentage points to growth in Indiana and Oregon and more than one percentage point to growth in Michigan, Wisconsin, and Tennessee.
- Retail trade contributed to real GDP growth in every state and was the leading contributor in Oklahoma and Florida.
- Finance and insurance was the leading contributor to real GDP growth in five states and contributed more than one percentage point to growth in New York and Connecticut.
- In North Dakota, the fastest growing state in 2010, mining contributed nearly two percentage points to real GDP growth.
- Construction continued to be a drag on real GDP growth, declining for the sixth consecutive year and detracting from growth in most states. Nevada was particularly hard hit—construction subtracted nearly two percentage points from the state's real GDP growth.
- Alaska had the highest per capita real GDP at \$63,424. Mississippi's (\$29,345) was the lowest.

BEA data—including GDP, personal income, the balance of payments, foreign direct investment, the input-output accounts, and economic data for states, local areas, and industries—are available on the BEA Web site: www.bea.gov. E-mail alerts are also available.

NOTE: The next release of GDP by state will be in June 2012.
